Eid2 Verbesserung AM - Inheritance

```
main.ts
export let a12: CanvasRenderingContext2D;

let objects: MovingObjects[] = [];
let n-kids: number = 12;
let n-snow: number = 160;
let n-cloud: number = 3;
let img: ImageData;

function init() {
```

init
+ bsp. SnowInfo

let Canvas: HTMLCanvasElement =
document.getElementById(...)

ctx = canvas.getContext("2d");

create gradient:
zeichne Rechteck
mit Farbverlauf

zeichne Kreis
für Sonne
setze Farbe Gelb

zeichne Linie für
Piste

i: number = 0

Gleiche
Schleife
für Kinder
und Wolken

i++

[i < n_snow]

let sn = new SnowInfo

objects.push(sn)

WidsDown.ts

```
export class WidsInfo  
extends MovingObjects
```

```
headcolor: String;  
bodycolor: String;  
md: boolean;
```

```
constructor(-x: number,  
            -y: number,  
            -headc: String,  
            -bodyc: String)  
super(-x, -y)  
this.x = -x;  
this.y = -y;  
this.headcolor = headcolor;  
this.bodycolor = bodycolor;
```
